

**Average Annual 4th Highest Peak  
Daily Running 8-Hr Ozone Values  
(i.e., 8-Hr O<sub>3</sub> "Design Values" <sup>a</sup>)  
Wis. DNR Ozone Monitoring Sites  
2001 - 2003**

(a) If the average of the annual 4th highest peak daily 8-hr running ozone values for the most recent three consecutive years of data (i.e., Design Value ["DV"] ) is less than or equal to 0.08 parts per million (ppm, numerically equivalent to 84 ppb) for all monitors in an area, it has been proposed for attainment status. Sites whose 8-hr O<sub>3</sub> DVs are 84 ppb or less are denoted by white circles on this map. Sites with a WDNR ozone monitor that have an average of its annual 4th highest peak daily 8-hr ozone values for 2001-2003 in excess of the 8-hr ozone NAAQS of 0.08 ppm (84 ppb) are denoted by dark circles. WI recommended and EPA proposed nonattainment area design monitors are named in bold and underlined and the nonattainment area names are noted. All other Wisconsin counties are proposed as "attainment" status for 8-hour ozone based on the final 2001-2003 data.

(b) The Pleasant Prairie site is also referred to as Chiwaukee.
